HMIVHM
hemagglutinin precursor - influenza A virus (strain A/Mem/102/72)
N.Contains: hemagglutinin HA1; hemagglutinin HA2
C.Species: influenza A virus
C.Date: 19-May-1994 #sequence revision 19-May-1994 #text_change 31-Mar-2000
C.Accession: A94441, A04051
R.Sleigh, M.J.; Both, G.W.; Brownlee, G.G.; Bender, V.J.; Moss, B.A.
in Structure and Variation in Influenza Virus, Lawer, G., and Air, G., eds., pp.69-79, E.A; Title: The haemagglutinin gene of influenza Virus: nucleotide sequence analysis of d. A; Accession: A94441

-i- FUNCTION: HEWAGGLUTININ IS RESPONSIBLE FOR ATTACHING THE V. CELL RECEPTORS AND FOR INITIATING INFECTION.

-i- SUBUNIT: HOMOTRIMER. EACH OF THE MONOMERS IS FORMED BY TWO (HA1 AND HA2) LINKED BY A DISULFIDE BOND.

-i- SIMILARITY: BELONGS TO THE INFLUENZA HEMAGGLUTININ FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Influenza A virus (strain A/Duck/Hokkaido/33/80) Viruses; ssRNA negative-strand viruses; Orthomyx Influenza A viruses; Influenzavirus A.

-!- FUNCTION: HEMAGGLUTININ IS RESPONSIBLE FOR ATTACHING THE VCELL RECEPTORS AND FOR INITIATING INFECTION.

-!- SUBUNIT: HOMOTRIMER. EACH OF THE MONOMERS IS FORMED BY TWO (HA1 AND HA2) LINKED BY A DISULFIDE BOND.

-!- SIMILARITY: BELONGS TO THE INFLUENZA HEMAGGLUTININ FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      [1]

-i- FUNCTION: HEMAGGLUTININ IS RESPONSIBLE FOR ATTACHING THE V-CELL RECEPTORS AND FOR INITIATING INFECTION.

-i- SUBJUNIT: HOMOTRIMER. EACH OF THE MONOMERS IS FORMED BY TWO (HA1 AND HA2) LINKED BY A DISULFIDE BOND.

-i- SIMILARITY: BELONGS TO THE INFLUENZA HEMAGGLUTININ FAMILY.

"Molecular evidence for a role of domestic ducks in the introd
of avian H3 influenza viruses to pigs in southern China, where
A/Hong Kong/68 (H3N2) strain emerged.";
J. Gen. Virol. 72:2007-2010(1991).
-!- FUNCTION: HEWAGGLUTININ IS RESPONSIBLE FOR ATTACHING THE VI
CELL RECEPTORS AND FOR INITIATING INFECTION.
-!- SUBUNIT: HOMOTRIMER. EACH OF THE MONOMERS IS FORMED BY TWO
(HA1 AND HA2) LINKED BY A DISULFIDE BOND.
-!- SIMILARITY: BELONGS TO THE INFLUENZA HEMAGGLUTININ FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    P43257;

FUNCTION: HEMAGGLUTININ IS RESPONSIBLE FOR ATTACHING THE VIRUS CELL RECEPTORS AND FOR INITIATING INFECTION.

CELL RECEPTORS AND FOR INITIATING INFECTION.

SUBUNIT: HOMOTRIMER: EACH OF THE MONOWERS IS FORMED BY TWO CHAI (HA1 AND HA2) LINKED BY A DISULFIDE BOND.

SIMILARITY: BELONGS TO THE INFLUENZA HEMAGGLUTININ FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    330

J. Virol. 39:845-853 (1981).
-i- FUNCTION: HEMAGGLUTININ IS RESPONSIBLE FOR ATTACHING THE VIRUS TO CELL RECEPTORS AND FOR INITIATING INFECTION (BY SIMILARITY).
-i- SUBUNIT: HOMOTRIMER. EACH OF THE MONOMERS IS FORMED BY TWO CHAINS (HA1 AND HA2) LINKED BY A DISULFIDE BOND (BY SIMILARITY).
-i- SIMILARITY: BELONGS TO THE INFLUENZA HEMAGGLUTININ FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Envelope protein; Glycoprotein; Hemagglutinin; Signal SIGNAL 1 16 POTENTIAL. Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

"Sequence analysis of a near-subtelomeric 35.4 kb DNA segment on the
right arm of chromosome VII from Saccharomyces cerevisiae carrying
the MAL1 locus reveals 15 complete open reading frames, including
ZUO1, BGL2 and BIO2 genes and an ABC transporter gene.";
